

CONTENTS

Introduction: The Four Musketeers *xi*

1. A Wealth of Indicators	1
1.1. Introduction	1
1.2. A bird's-eye view	2
1.3. Aggregating the nonaggregatable?	8
1.4. Correcting GDP	16
1.5. Sustainability assessment: weak or strong?	19
1.6. Coping with multidimensionality: dashboards	27
1.7. The core question: how far can aggregation go?	33
2. Measuring Sustainability	35
2.1. Introduction	35
2.2. Wealth and sustainable well-being	39
2.2.1. Discounting future streams of well-being?	39
2.2.2. From intertemporal well-being to sustainable consumption	43
2.3. The savings approach: a reference framework	49
2.3.1. Shifting the focus to sustainability: why?	49
2.3.2. Sustainability in imperfect but predictable economies	51
2.3.3. An example	54
2.4. The savings approach: many problems remain	59
2.4.1. Monetization in practice	61
2.4.2. Behavioral indeterminacy, or when "weak" indicators can turn out too strong	64
2.4.3. Technological and normative uncertainties	67
2.4.4. An additional problem: the cross-national dimension of unsustainability	69
2.5. Conclusion: where to go from here?	73

3. A Price for Everything?	76
3.1. A revealed preference argument	78
3.1.1. The argument for an individual consumer	78
3.1.2. Extending the argument to social welfare through a representative agent	80
3.1.3. Extending the argument to social welfare with an optimality assumption	83
3.2. A variant of the revealed preference argument	86
3.3. The theory of index numbers	88
3.3.1. An axiomatic approach	89
3.3.2. Approximating welfare changes	92
3.4. Decomposing welfare	96
3.4.1. A first decomposition, with the social expenditure function	96
3.4.2. A second decomposition, in terms of efficiency and equity	98
3.4.3. A new decomposition, based on Bergson curves	102
3.4.4. Another decomposition, for small variations	105
3.5. Specific problems with imputed prices and full income	108
3.6. Conclusion	112
4. Equivalent Income, or How to Value What Has No Price	115
4.1. Money-metric utility and equivalent income	117
4.2. Knockout criticisms?	122
4.2.1. Not welfarist enough	122
4.2.2. Too welfarist	123
4.2.3. Potentially regressive	125
4.2.4. Reference dependent	127
4.2.5. Arrow's coup de grâce	130
4.3. Fairness to the rescue	133
4.3.1. The equivalence approach in fair allocation theory	134
4.3.2. Arrow Independence is not compelling	138
4.3.3. References need not be arbitrary	141
4.3.4. The right dose of welfarism	144
4.3.5. Bundle dominance is unacceptable	145
4.3.6. Egalitarianism is demanding	150
4.4. Social welfare decomposition	154
4.5. Conclusion	158
5. Is Happiness All that Matters?	160
5.1. The Easterlin paradox: Have we been wrong for 70,000 years?	163

5.1.1. Bentham is back	164
5.1.2. The debate about subjective welfarism	167
5.1.3. Is happiness the ultimate goal?	169
5.1.4. The key objection to subjective scores	172
5.2. A theory of subjective well-being	174
5.2.1. Affects and judgments	175
5.2.2. The three problems of the respondent	176
5.2.3. Heterogeneous and shifting standards	185
5.2.4. What do people care about?	191
5.2.5. Comparisons across preferences	193
5.3. Making use of happiness data	194
5.3.1. Proposed indicators	194
5.3.2. Putting affects in their place	196
5.3.3. Identification problems	196
5.3.4. Can happiness data be improved?	199
5.4. Conclusion	201
6. Empowering Capabilities	204
6.1. The capability approach	206
6.1.1. From basic needs to capabilities	206
6.1.2. Functionings, between “opulence” and “utility”	207
6.1.3. From functionings to capabilities	209
6.2. Capabilities as opportunities	210
6.2.1. Valuing sets	210
6.2.2. The relevant aspects of opportunities	213
6.2.3. Shaping opportunity sets	216
6.2.4. Equality against set valuation	218
6.2.5. Why capabilities?	222
6.3. The valuation issue	225
6.3.1. The intersection approach	226
6.3.2. Disagreement and respect for diversity	228
6.3.3. Implications of respect for personal preferences	231
6.4. Is the CA a separate approach?	234
Conclusion: How to Converge on a Multiplicity	237
Why synthetic indicators?	237
Shortcuts and pitfalls	240
Vices and virtues of monetary indicators	242
A multiplicity of synthetic indicators	245
Sustainability warnings	246
Appendix A. A Theory of the Reference for Equivalent Incomes	250
A.1. The model	250
A.2. Reference operators	251

A.3. Nonmarket goods	252
A.4. Market prices	256
A.5. The household problem	262
Appendix B. Proofs	265
B.1. A Paretian rank-dependent criterion	265
B.2. Reference-price independence	268
B.3. A simple proof of Arrow's theorem in an economic framework	271
<i>Bibliography</i>	275
